

INSIDER Tip...

## Don't Waste Your Money

### On products that dont work

Wall sprayers have an attractive price point, there is no doubt about it. But they are not effective for commercial scenting or odor removal. The size of the droplets that come from the spray bottle are measured by fractions of a millimetre whereas the particles emitted from a NeoScent cold-air diffuser are less than a micron in size. This means that we are able to distribute our aroma evenly with millions of molecules that do not succumb to gravity the way water droplets do.

## Do Not Neglect Your Smelly Parts

## Malodour Removal

**NeoScent**  
International

### what we are doing

From the smell of smoke, to strong food odors, and everything in between, if you have an odor problem, NeoScent can solve it!

NeoScent has a patented oil formula designed to kill malodorous compounds by changing their structure at a molecular level. Once the bad smell has been eliminated, NeoScent leaves your space with a new pleasant aroma. And it's easy! We dispense it via vapor, using the same cold-air scenting systems as our standard aroma oils.

**NeoScent**  
International

Our approach to malodour remediation, uses a method which, unlike other companies, does not "mask" or "cover" unpleasant smells. We get down to a molecular level and actually neutralise them using a patented technology

### TAKE A LOOK

### How it works

Firstly, NeoScent vapor particles are released into the environment which contains the odour problem

Next, the NeoScent particles seek seek out and attach themselves to the bad odour molecules

Once this is complete, the shape of the particle has now changed, and this is what will determine how our brain interprets the aroma

In the end, all that remains is the pleasant aroma the NeoScent has released and you are left with a space, free of bad odours

It's **Real** Science

### why you choose us
